DETAILED ACTION

This is a response to the amendment filed 11/4/2003. Claims 1-9 are pending.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Callahan (USP 5,418,486), newly cited prior art. Figure 2 shows a circuit for generating a constant pulse width output signal comprising steps of applying one of the pair of pulse width modulated signals (202 236) to both a set input of a latch circuit (250, 252) and to a delay circuit (204), applying the other of the pair of the pulse width modulated signals (202, 236) to a reset input of the latch circuit, wherein both of the pair of pulse width modulated signals have substantially constant and equidistant start transition times (figure 3), obtaining a constant width drive signal for the output (Q, Q/) of the latch circuit as called for in claim 1.
- 3. Claim 2 is rejected under 35 U.S.C. 102(b) as being anticipated by Callahan (USP 5,418,486). Figure 2 shows a circuit for generating a constant pulse width output signal comprising a first pulse width modulated control signal supplying means (220) connected to a delay circuit (204), a second pulse width modulated control signal supplying means (230), wherein both of the pair of pulse width modulated signals have substantially constant and equidistant start transition times, a toggle circuit (250, 252) connected to said first and second control signal supplying means, the toggle circuit supplying a first output drive signal level (Q)

Art Unit: 2816

upon detecting a given characteristic of a first pulse width modulated control signal, and supplying a second output signal (Q/) level upon detecting said given characteristic of a second pulse width modulated control signal received from said second supply means as called for in claim 2.

Conclusion

1. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Allowable Subject Matter

4. Claims 3-9 are presently allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan T. Lam whose telephone number is 703-305-3791. The examiner can normally be reached on Monday to Friday (7:30 am to 6:00pm).

Art Unit: 2816

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, TIMOTHY P CALLAHAN can be reached on 730-308-4876. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9318 for regular communications and 703-872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.

Tuan T. Lam
